

Case Story

Extraction of aluminium dust from grinding and polishing at ALMONT d.o.o. In Slovenia

Situation: Almont is a producer of Al constructions and windows. When they moved the production in a new building they decided also to improve the working environment.

They have two grinding work places where two workers are grinding and polishing the welds with angle grinders.

Solution: We installed one P 30 portable high vacuum unit and connected it with two hoses on universal extraction nozzles which are mounted on the angle grinders.

Benefits: A Nederman portable unit, as P 30, offer high performance with mobility for various use. They are suitable for on-tool extraction and cleaning. At Almont, the unit is used for dust extraction during grinding and for cleaning the work places and the floor.
