

FilterMax application at Vechro S.A. - a pigment manufacturer.

Situation:

Vechro in Greece is a non-explosive pigment Manufacturer. The problem of dust was acute.

Solution:

4 FilterMaxes (2x3000 + 2x6000) with NCF fans were installed. The dust is captured at source by 12 Nederman Original Extractors, mainly 3,0 m. They also bought a mobile FilterBox as an extra unit when required. Now we are negotiating for providing them a VAC 20-1500 a High Vacuum unit.
