

Extraction of welding fumes with NEX HD arms

Situation: Clivanexport SA in Greece, manufactures ovens and mixers for bakeries. Four welding workplaces generated a lot of harmful welding fumes. Handling of insulation material also caused airborne particles.

Solution: Two NEX HD arms of 4 meters length and two of 5 meters powered by an NCF series fan, were installed for the capture of the fumes. The owner is very satisfied with the installation and is planning to expand it for two more workplaces, a Filtermax unit and a Fan Inverter. The system is also used for the extraction of airborne.
